

Amendments to the Specification:

Please replace the paragraph beginning on page 27, line 12, and ending at line 16, with the following amended paragraph:

Operations 400-404 may be performed at load time (i.e., in response to a call to a code frame in a non-loaded code assembly). That is, typically, the operations 400-404 do not involve execution of any code within the code assembly itself. If the code assembly is already loaded by virtue of a previous call to the code assembly in the call chain, operations 400-404 may be omitted.
